

Navigation & Drillthrough Walkthrough

Germany Crime Intelligence & Public Safety Analytics Platform

A guided tour of the dashboard's cross-page navigation system — how the six report pages connect to one another, and the exact interactions that trigger each connection.

POWER BI · BKA PKS 2015–2025

Context: The 2015 Baseline

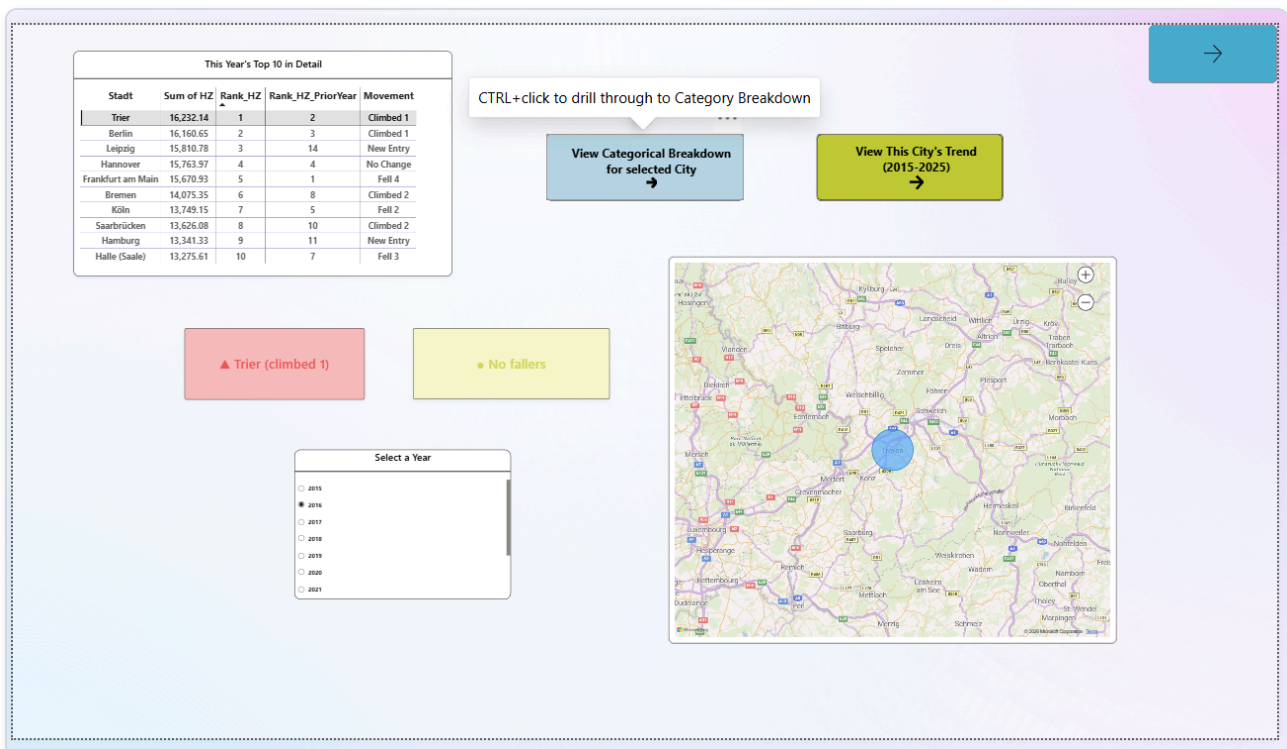

2015 baseline — every city shows New Entry

Before walking through the interactive paths, one data characteristic is worth understanding first: with the Year slicer on **2015** (the first year in the dataset), every city in the table shows **"New Entry"** under **Movement**, and both KPI cards fall back to **"No climbers"** / **"No fallers."**

This is correct behavior, not a bug — there's no 2014 data in this dataset to compare 2015 against, so rank movement genuinely cannot be calculated for the first year. Every subsequent year (2016 onward) has a real prior-year baseline to compare to, which is what the numbered walkthrough below demonstrates.

Page 1 — Main Metrics

Main Metrics, 2016, Trier selected

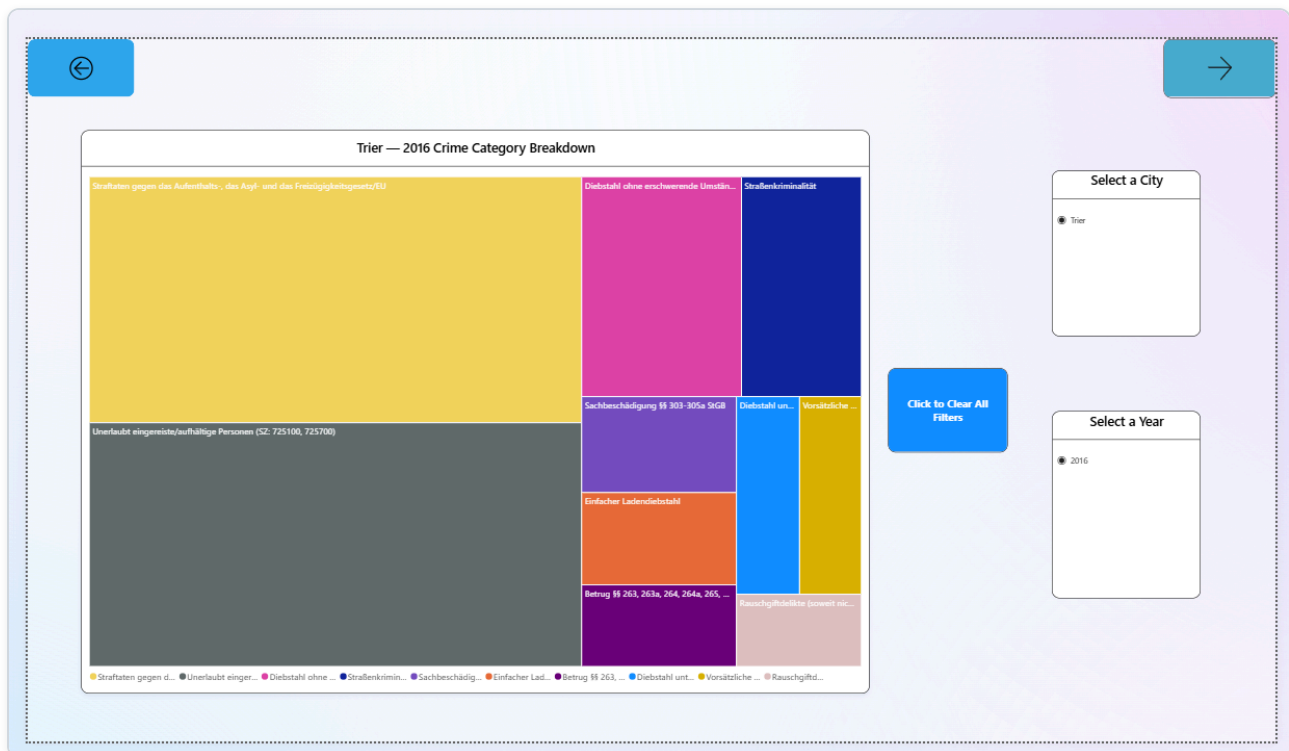

Year slicer set to 2016, Trier selected in the Top 10 table. With a real prior year now available, **Movement** calculates properly — Trier shows “Climbed 1,” Frankfurt am Main shows “Fell 4,” and so on.

Two dedicated navigation buttons appear once a row is selected:

- **“View Categorical Breakdown for selected City”** → drills through to Category Breakdown
- **“View This City's Trend (2015-2025)”** → drills through to City & Yearwise Breakdown

The tooltip **“CTRL+click to drill through to Category Breakdown”** is Power BI's own native drillthrough affordance, offered independently of the two custom buttons — both paths lead to the same destination.

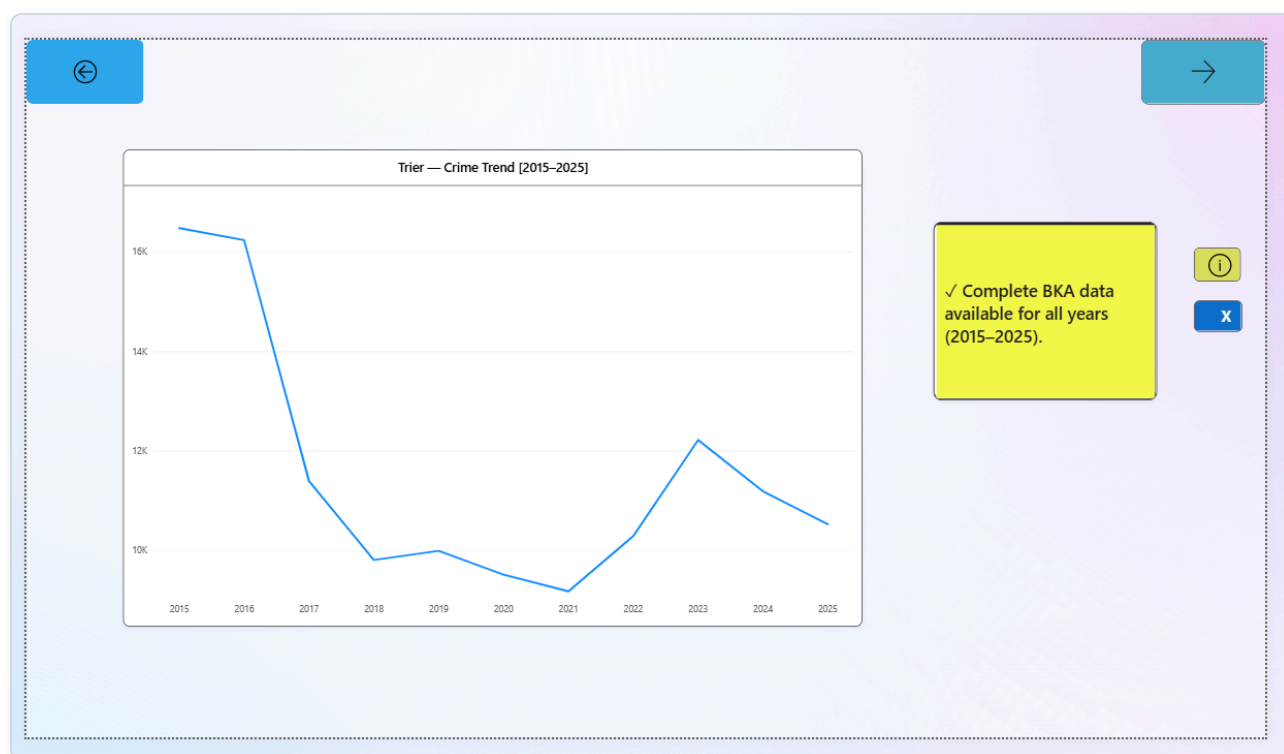

Page 2 — Category Breakdown (via button)

Category Breakdown, Trier 2016

Clicking **“View Categorical Breakdown for selected City”** from Page 1 lands here, correctly scoped to **Trier, 2016** — confirmed by the dynamic title and both the City and Year slicers reflecting the drillthrough context automatically.

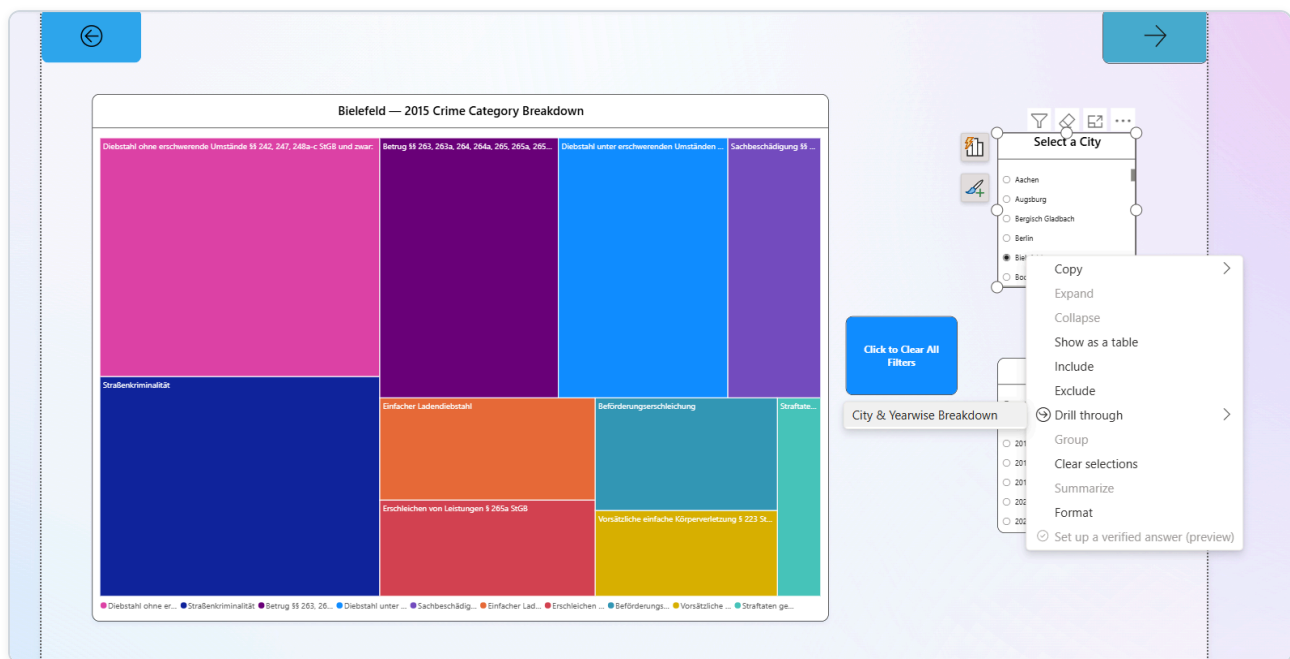

Page 3 — City & Yearwise Breakdown (via button)

City & Yearwise Breakdown, Trier full trend

Clicking **“View This City's Trend (2015–2025)”** from Page 1 instead leads here — a different question entirely from Page 2's single-year snapshot. This page shows Trier's full 11-year HZ trend as one continuous line, with the data-quality note already open confirming complete BKA data across all years (no gaps like Schwerin's).

Page 4 — Reverse Drillthrough via Category Breakdown's Own Slicer

Right-click drillthrough from Category Breakdown's city slicer

Category Breakdown isn't only reachable *from* Main Metrics — it can also launch its own drillthrough *to* City & Yearwise Breakdown. Right-clicking a city inside Category Breakdown's own **"Select a City"** slicer (here, Bielefeld) surfaces **"Drill through → City & Yearwise Breakdown"** directly in the context menu, since **Stadt** is already sitting in that page's filter context via the slicer — no need to route back through Main Metrics at all.

Page 5 — Drillthrough from a Specific Trend Point

Tooltip drillthrough on a specific year

The reverse direction also works at the individual data-point level. Hovering a specific point on Trier's trend line (here, 2016) shows a tooltip with **Sum of HZ**, **Sum of erfasste Fälle**, **Average of AQ** — and a “**Drill through**” option, since that single point carries both `Stadt` (Trier, from page context) and `Year` (2016, the specific point clicked) simultaneously. This jumps straight to Category Breakdown for that exact city-year combination.

Verified against source: Trier, 2016 — 18,653 cases, HZ 16,232.14, AQ 80.8% — exact match to the raw BKA file.

Summary: Cross-Connectivity Map

From	Action	To
Main Metrics	"View Categorical Breakdown" button	Category Breakdown
Main Metrics	"View This City's Trend" button	City & Yearwise Breakdown
Main Metrics	Native right-click / Ctrl+click	Category Breakdown
Category Breakdown	Right-click on city slicer	City & Yearwise Breakdown
City & Yearwise Breakdown	Hover + drill through on a specific year point	Category Breakdown

No page is a dead end — every drillthrough page can be reached from at least two different interaction paths, and several support the reverse journey as well.
